

Statement for SITE catalogue:

When we stand and look at the stars we see a delicate beauty. The universe is a silent and tranquil expanse that gives little indication of the processes necessary to render it visible to our eye. We record events from which we are separated by vast distances, and speculate on the forces that power our physical world. The closer we look, the more we learn about the magnitude and the complexity of the events that we witness. As our observations become more precise, the pieces of a boundless puzzle accumulate and a picture of the underlying nature of our universe slowly evolves before us.

Richard Alpert

"Ricochet", 1978, Oil Block Ink on Drywall, dim. 6'x10'x24'.
